

JOURNEY - GINIE

Introduction :

Journey Ginie is an all-in-one travel platform designed for effortless trip planning and booking.

The website offers trip selection, accommodation services, transport options and secure payments ensuring a travel experience.

With a user-friendly interface and a visually appealing blue and white theme, Journey Ginie provides essential features such as registration, login, destination selection, booking management and an admin dashboard. The website is built with separate HTML, CSS and Javascript for better organization and performance.

Journey Ginie simplifies travel by integrating everything travellers need into a single platform, making journeys smoother and more enjoyable.

supremo®

CORE
JAVA

3rd edition

PURPOSE & OBJECTIVE :-

JOURNEY GINIE is designed to be a smart, user-friendly and all-in-one travel companion, simplifying the way travelers plan, book and experience their journeys.

→ The platform aims to eliminate the complexities of trip planning by integrating destination selection, transport options, accommodation booking and secure payment into a seamless and intuitive interface.

With a focus on convenience, personalization and efficiency, Journey Ginie ensures that users can explore the world with ease, making their travel experiences more enjoyable and hassle-free.

Objectives :-

① Seamless Trip planning -

Offer a well-organized and intuitive interface that allows users to search, compare and

supremo®

book trips effortlessly.

② All-in-one Travel platform:-

Integrate flights, trains, buses, cabs, hotel restaurants, travel partners and activities in a single unified system.

③ Interactive User Experience:- Implement engaging widgets, animations and a visually appealing blue-white-theme to enhance usability.

④ Personalized Travel Choices -

Enable users to customize trips by selecting multiple destinations, budget preferences and special offers.

⑤ Efficient booking & Secure payments :-

Provide a secure and fast payment gateway with multiple transaction options for a hassle-free booking process.

⑥ Robust Admin Dashboard:

Allow administrators to manage bookings, destinations, user profiles, payments and customer feedback efficiently.

⑦ Optimized for Accessibility & Performance

Ensure the performance and the platform is responsive and optimized for fast load speeds.

⑧ Scalability & Future Expansion:-

Design the website to accommodate future upgrades, such as AI-powered trip suggestions, loyalty programs and exclusive travel deals.

Features and functionality of Journey Gini :-

Key Features:-

① User Management:-

- User Registration & login - Secure sign-up and login with password protection.
- Aadhar verification :- Identity verification for authenticity.
- Profile Management :- Users can update personal details, preferences and budget.

② Trip Booking System :-

• Destination Selection - User can choose from a list of popular destinations.

• Multi-Destination support option to add/remove multiple destinations.

• Dynamic pricing Display :- Transparent pricing for each selected destination.

• Grid-Based Layout :- Visually appealing design for easy trip selection.

1) Accommodation & Transport Booking :-

Flights, Trains, Buses and Cabs - multiple transport options available for booking.

Hotels, Restaurants, spas, Malls - accommodation and leisure options for travellers.

Inclusive & Discounts : special deals displayed in a grid layout.

Booking Confirmation & Conf. Status Tracking :-

Real-time updates on reservations.

4) Secure payment system :-

- Multiple payment modes : Credit / debit cards, net banking and wallets.

- Instant Transaction Confirmation - Automatic receipt generation and booking confirmation

- Secure Encryption : Ensuring safe transaction

for users.

⑤ Admin Dashboard :

Destination & booking Management - Admins can add/edit/delete travel destinations & manage bookings.

User Management : Admins can monitor registered users and their bookings.

Payments & Revenue section :- Track payments and user reviews for service improvement.

Analytics & Reports :- Insights into user engagement and booking trends.

⑥ Interactive UI & Widgets :-

• Ombre light Blue Theme :- Visually appealing and modern design.

• Optimized Elements : Smooth transitions and engaging animations for an enhanced experience.

supremo

- Real-Time Search & Filters - Quick destination search with filters for personalized results.

(6) Future Enhancements :-

- User authentication and role-based access.
- Graphical analytics dashboard (e.g. tour popularity, revenue.)
- API integration for real-time data updates.

(7) Security & Authentication (Upcoming features) :-

- User authentication (Admin must login to access the dashboard).

- Role-based access control (only authorized users can perform specific actions).

- Secure APIs to protect data.

- Future Enhancement : Two factor Authentication.

-cation.

TECHNOLOGIES USED :-

Frontend : HTML, CSS, Javascript

Backend : Java (SpringBoot)

Security : Spring Security

Database : MySQL

Tools : Thymeleaf, Lombok, JAP.

Dt : 13/01/2025

① Setting up a Spring Boot project in
VS code :-

- ① Download and Install Java JDK
- Download JDK 17 or later from:
Oracle or open JDK.
 - Verify installation:
`java -version`

- ② Install maven :-
- Install from Apache maven.
 - Verify installation:
`mvn -version`

- ③ Install visual studio code & extensions :-
- Install the VS code extensions:-
 - Spring Boot Extension pack
 - Java Extension pack
 - Lombok annotations support for
VS code .

- ④ Create a Spring Boot project :

- ② Create a SpringBoot Project :-
- ① Using Spring Initializer
- Open Spring initializer in a browser:
start.spring.io
- ② Select :-
- Project : Maven
 - Language : Java
 - Spring Boot Version : 3.2
- ③ Dependencies :
- Spring Web
 - Spring Thymeleaf
 - Dev
 - JPA (spring data jpa)
 - Validation
 - Lombok
 - mysql - driver
- ④ Click Generate, the download the zip file.
- ⑤ Extract the project and open it in vs code.

Date :- 14/01/2025

③ Open and Run the code. in vs code:-

- Open the project folder in vs code.
- Run the spring boot application.
- Just if the project is running.

* Created a Home Page :-

→ Implemented Home Controller.java to handle / route.

→ Designed home.html and style using CSS named home1.css.

→ Tested the page by running the application and opening <http://localhost:1211/> (path)

Date :- 15/01/2025

EDITTING HOME PAGE :-

- Edited home page for providing a good look to the home page.
- added destination, attraction and tour section to the home page.

Dt : 16/01/2025

DESIGN OF HOME PAGE :-

- Added a banner of why user / customer should choose our website.
- Also added a offer part where best offers of tours and destinations will be present.

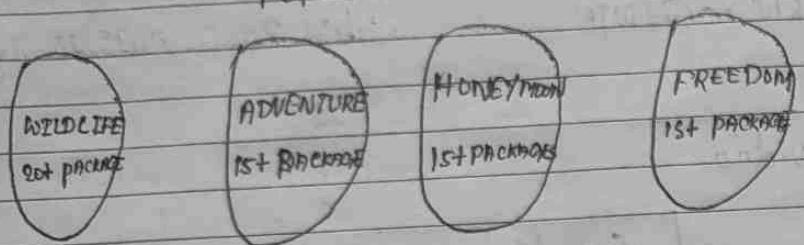

Dt : 17/01/2025

CREATING BOOKING SECTION AND REVIEW PART :-

- Created a booking section where user can book a tour to any destination whatever he/she wants.
- Also created a review section where users can give reviews.

MADE CONTROLLERS :-

* Created controllers for :-

① Home Controller :- Handles home page pages

② User Controller :-

→ Handles user related logics like

- Registration
- Login
- updating personal details .
- saved itineraries .

③ Destination Controller :-

→ Handles destination - related data .

- managing location details .
- search functionalities .
- Filtering tours by destinations .
- Data
- Budget .
- Itineraries .

④ Tours Controller :-

→ Handles tour - related data .

• Book and managing tours .

• Data .

• Budget .

• Dividing tours by user interests .

⑤ Booking Controller :-

→ Handles and manages bookings .

• Processing booking requests .

• Checking availability for selected dates and packages .

• Generating booking confirmations .

• Handling cancellations and modifications .

• managing payment details .

• Booking successful page .

⑥ Admin Controller :-

→ Manages admin users and datas .

- Adding and managing destinations
- Creating and editing tour packages
- Monitoring booking activity
- Generating reports and analytics
- Managing vendors relationships
(hotels, transportation providers)

⑥ Review Controller :-

- add Review
- edit Review
- Delete Review
- Get Review

MAKING PAGES THAT REQUIRED FOR WEB APPLICATION :-

① Destination page

② Tour page

③ Pdp
Page for both destination and tour.

→ Complete the destination page to display multiple destinations available in our website which is our page .

→ Ensure all packages are managed from a single database and admin dashboard .

→ Also created the tour page to display all available tours .

→ Where all the tour packages and trip plans will be displaying .

Date :- 20/01/2025

Working on pdp page:-

- Working on pdp page of both destination and tour page.

DESTINATION PDP :-

- Have destination details (title, description, price etc).
- Image and pricing information.
- Booking button which will be linked to booking page.

TOUR PDP PAGE :-

- Have tour details (title, description, itinerary)
- Image and pricing information.
- Booking button which will be directed to booking page.

Om Prakash
21.01.25

Date :- 21/01/2025

WORKING ON BOOKING PAGE:

✓ Developed the booking page with the following Features :-

- User selects a tour package / destination from the pdp page.

• From the customer details (name, email, phone, phone number, no. of travelers, travel dates).

- Pricing summary based on selection.

• Payment options (UPI, paypal etc and to be integrated later).

- Booking confirmation message after submission.

Date :- 22/01/2025

* BOOKING SUCCESSFUL PAGE :-

- Displays a confirm message for the user after a successful booking.
- Shows four name, travel date, number of travelers and total price.
- Thankyou message saying Thankyou for booking with us.
- Booking successful message
- Navigate Buttons :-

options to return to the homepage or explore more tours or destinations.

Date :- 23/01/2025

* STARTED MAKING ATTRACTION PAGE :-

It contains the following features :-

① List of Attractions :-

Display various attraction available for visitors.

② Images and descriptions :- Also created a separate php page where every attraction has high-quality images and brief description.

③ Nearby Activities :- Suggestions for things to do near attractions

④ Also added a button whose name is discover more, after clicking it, this will direct to php page where all the attractions are present.

Date :- 24/01/2025

* MADE PAGE FOR TRAINS, BUSES,
AEROPLANES & ACCOMMODATIONS :-

• Made a page where following features
are providing:-

① List of Hotels and stay :-

(1) Displays different hotels, resorts or
home stays.

→ Sort by price, rating, location and
amenities.

→ Shows images, descriptions, facilities and
reviews.

② List of Trains :-

→ In the same page, added trains, timing
duration and images.

③ Buses :-
→ In this page there is an option for buses

Date :- 25/01/2025
Review Page :-

① User Review Section :- displays customer
feedback on tours, accommodations and
cabs etc.

② Star Ratings :-

① User Review Section :- displays customer
feedback on tours, accommodations and
cabs etc.

② Star Ratings: user can rate their
experience (1-5 stars).

③ Review Submission from :- Allows users
to submit their feedback with a name,
rating and comments.

④ Reviews can be approved, deleted or
flagged by admins.

CREATE ENTITY CLASS FOR EVERY FIELD :-

① An entity class represents a class represents a database table in Java.

→ It typically includes fields (variables), getter/setter, constructors, annotations, and relationships.

→ How to Create ?

• Mention the name of the entity (e.g. Tour, Destination, User etc).

• Describe the fields and added (e.g. id, name, price, location).

Date :- 29/01/2025 :-

* CREATED A REPOSITORY :-

- Created an interface extending JPA Repository to interact with database

- e.g. import org.springframework.data.jpa.repository.JpaRepository;

public interface TourRepository extends JpaRepository<Tour, String> {

3

(Date :- 30/01/2025

* SETTING UP MySQL for my project :-

Today, I focused on preparing my database for the Journey-Genie.

Since, I need to store tour packages, packages, tours, destination, bookings etc.

Step:- 1 After installing database if not present and connect it with Springboot.

Step:- 2 Creating my database :-

To keep all my project data, I created a new database :-

CREATE DATABASE Journey-Gin

→ Then, I checked if it was created successfully.

Date :- 31/01/2028

* ADDING mysql DEPENDENCIES :-

→ Already added mysql dependency during project setup.

→ Next, I needed to tell spring boot how to connect to my Journey-genie database.

→ I opened application properties and added:

spring.datasource.url=jdbc:mysql://localhost:1211/journey-genie

spring.datasource.username=root
spring.datasource.driver-class-name=com.mysql.cj.jdbc.Driver

Spring.jpa.database-platform=org.hibernate.dialect-auto-update
spring.jpa.show-sql=true

* STARTED WORKING ON ADMIN PAGES:-

→ Planning the admin panel :-

The admin panel is essential for managing tours, packages, destinations, bookings dashboard and widget.

→ It has the following features :-

- A fixed left sidebar
- A top navigation bar
- A main content area

→ Admin can add tours, destination get data from bookings from the end side.

* CREATED A HOME PAGE FOR ADMIN DASHBOARD USNG HTML, CSS and JS :-

→ I have created a home page for admin dashboard.

→ It has a fixed left side bar.

→ A top navigation bar.

→ A main content area with summary and bookings.

→ A responsive layout which font awesome icons.

→ Now, I need CSS styling to make the dashboard look professional.
Which is admin-form.css.

ADMIN DASHBOARD (HOME PAGE) :-

DT : 08/02/2025

* WORKING ON ADMIN DASHBOARD'S LOGOUT PAGE :-

→ Purpose :- To allow admin users to successfully / securely logout of the system.

→ Functionality :-

- Ends user session.
- Redirects to the login page after confirmation.
- provides a "Cancel" option to stay logged in.

Date :- 09/02/2025

* WORKING ON DATABINDING OF ADMIN DASHBOARD :-

→ Purpose : automatically link backend data to the admin panel UI.

→ It ensures real-time updates without manual intervention.

→ Improves efficiency by reducing redundant code.

* Steps :-

→ Retrieved data from the database and displayed it in the UI.

→ Used loops to dynamically populate tables for rows, backings, destination and packages.

→ Enabled real-time update. When data is added, edited and deleted.

Summary
10/02/25

Date : 10/02/2025

* FIXING ERRORS :-

→ Data not displaying correctly in tables.

→ Buttons are working.

Debugging steps taken :-

• Used console logs and debugging tools to identifying errors.

• Checked backend logs for errors in database queries.

Fixed css layout issues for responsive.

Date : 11/02/2025

* FIXING REMAINING ISSUES :-

→ Table data not updating properly after actions.

→ Forms not validating correctly.

Fixes applied :-

- Checked sql queries for syntax errors and missing values.

- Fixed foreign key constraints causing data insertion failures.

- Used javascript event listeners ensure buttons work as expected.

- Corrected css styling issue misaligned buttons (and fixed)

Date :- 13/02/2025

Date :- 13/02/2025

* WORKING ON DATABINDING OF TOUR PART OF ADMIN DASHBOARD:-

Step :- Fetching tour Data from database :-

- Retrive four details (name, location, price, images, availability etc.) from the database.

- Use an API or query to fetch the data.

Step 2 :- Displaying data in Admin panel :-

- Use javascript to fetch and display tour details.

- Update the HTML table. When data is retrieved.

* WORKING ON THE DASHBOARD
DATABINDING TO HOME PAGE / DESTINATION HOME PAGE :-

- Created an input form for add new tour.

- send data to the backend & refresh the table dynamically

- go HTML part added a loop the help of which data is coming from dashboard to frontend.

- successfully completed this

Date :- 14 / 02 / 2025

* DATABINDING PART OF DESTINATION PAGE :-

Step 1 :- Fetching data from destination table from database

- Retrieve destination details (name, country, city, images etc).
- Use an API or query to fetch the data.

Step 2 :- Displaying data in Admin panel.

- Use Javascript to fetch and display destination details.

- Update the HTML when the data is retrieved.

Date :- 15 / 02 / 2025

* ADDING A NEW DESTINATION :-

- Create an input form for adding new destination.
- Send data to the background and refresh the table dynamically.
- This part is completed.

Done
15.02.25

Date :- 16/02/2025

- Working on image uploading in.
- The image is manually placed in upload-images folder.
- The image filename is stored in the database for retrieval.

① Date : 17/02/2025

* Working on error image upload :-

→ There was an error image upload part.

→ The image is coming to upload images of folder and in database but not showing in dashboard and frontend.

→ Error fixed.

Date :- 18/02/2025

* WORKING ON IMAGE UPLOADING OF THE TOUR PART :-

→ Doing image uploading as i did in the destination part.

→ The image is successfully added in database and

showing in frontend.

① Date :- 22/02/2025

* WORKING ON PACKAGES PART OF ADMIN DASHBOARD :-

→ Admin entering details of the form sends package data to the backend API.

→ When the admin submits the form, the backend API enters the package into the database.

Date :- 23/02/2025

* WORKING ON FRONTEND PART OF PACKAGES :-

- The admin panel should fetch and display all packages in a table.
- The admin can edit package details such as name, price or availability.
- Admin can remove a package if it is no longer available.

Date: 07/03/2025

- Once the user submits the form, the data needs to send to the backend for processing.
- Captures from data and sends it to backend.
- Redirects to the login page after successful registration.

* WORKING ON BACKEND PART OF REGISTRATION :-

- In the backend, use store user details in a user table.
- inserts users data into the database.
- Encrypts user data into the database.
- Encrypts passwords (to be improved with bcrypt for security).
- Sends a success message after registration.

Outro
7/03/25

Date : 09 / 03 / 25

RETRIEVING REGISTERED USERS :-

- Admins can view a list of registered users.
- Created a registration form with data binding.
- Stored user details in database.
- Redirected users to the login page after registration.
- Created an API to retrieve registered user.

Date : 10 / 03 / 2025

* ADDED LOGIN FUNCTIONALITY :-

- Today, I worked on implemented like Login return for Journey-Genie.

Date :- 11/02/25

* UPDATE DESIGN OF HOME PAGE :-

- Added some more designs for better look.

Date :- 12/02/25

* WORKING ON BACKEND PART OF LOGIN :-

- Once the user enters their credentials they need to be sent to the backend for validation.

- Sends login credentials to backend.

- Stores user details in database after successful authentication.

13/03/25 :-

* WORKING ON WIDGET DATABINDING :-

- Worked on the widget page for offers in journey-ginic dashboard.

- This page allows the admin to manage special deals and discounts for travel packages.

- Created a structured layout following the admin panel's design pattern.

- Added a database table to display existing offer names, discount percentage start and end dates and status.

Date : 17/03/2025

* UPDATED DESIGN OF HOME PAGE :-

→ I have updated the design part of home page.

→ Added some more designs for better look.

Date : 19/03/25

→ Trying to fix error causing during edit button.

→ Working on javascript part of edit button.

→ Still, it is showing error.

Date : 18/03/2025

* WORKING ON EDIT BUTTON :-

→ Working on edit button.

→ Adding functionality to edit button.

→ It is showing error.

Date : 20/03/2025 :-

* WORKING ON DELETE BUTTON OF ADMIN DASHBOARD :-

→ Working on delete button next to each record in the data table.

→ Implemented a popup confirmation before deletion to prevent accidental removal.

→ Ensured that delete button only shows the rows is available or unavailable and not completely deleted the record.

Date : 20 / 02 / 2025

Working widget table and edit
and delete button.

Date :- 21 / 02 / 2025

Still working on widget table. fixing
errors in dashboard.
